Syncpoint AI — Business Operating System

Goal: \$4,000–\$12,000/month | 2 hours/week oversight | No inventory | Cold start

Phase 1: AI Voice Agent Reseller (Months 1-5)

Target: 8–12 dental offices in TX, AZ, CA, CO, NV on \$500–\$797/month retainers.

Phase 2: Healthcare Automation Agency (Months 4+)

Layered on top of Phase 1. Same clients, expanded scope, higher retainers.

Document Index

File	What It Is
01-offer-and-pricing.md	Your exact offer, pricing tiers, guarantee language
02-target-market.md	ICP, how to build your prospect list, SW market specifics
03-cold-outreach-system.md	5-email cold sequence + LinkedIn scripts, fully written
04-agent-configuration.md	Bland AI setup guide, system prompts, dental call flow
05-client-onboarding.md	Step-by-step SOP to get a client live in 48 hours
06-weekly-oversight.md	Your exact 2-hour Monday morning protocol
07-automation-agency-phase2.md	Phase 2 expansion into healthcare workflow automation

Weekly Rhythm (Once Systemized — Month 3+)

Monday morning, 2 hours total: 1. Open weekly dashboard → review exception calls (30 min) 2. Reply to any client messages (20 min) 3. Review each client’s call volume + booking rate (20 min) 4. Send weekly performance emails (AI-drafted, you approve) (15 min) 5. Outreach check — review reply queue, approve next batch (35 min)

Stack (Month 1)

Tool	Cost	Purpose
Retell AI (pay-as-you-go)	~\$50-\$150/mo	Voice agent platform (better latency + inbound than Bland)
Google Workspace	\$12/mo	Email for cold outreach
Notion (free)	\$0	Client ops + docs
Instantly.ai or Lemlist	\$37-\$59/mo	Cold email automation
Cal.com (free)	\$0	Demo booking
Total	~\$125-\$250/mo	(scales with call volume)

Add GoHighLevel (\$97/mo) at Month 3 when you hit 5+ clients. It consolidates CRM, reporting, and reputation management in one place and makes Phase 2 (automation agency) much easier. # Offer & Pricing — Syncpoint AI

The Core Offer

“Your practice answers every call, books every patient, and never misses a follow-up — even at 2am — for less than you pay for one day of front desk coverage.”

You are not selling “AI.” You are selling a solved problem: missed calls = missed revenue. The average dental practice misses 30-40% of inbound calls. Each missed new patient call is worth \$800-\$2,500 in lifetime value. You answer that call.

Pricing Tiers

Tier 1 — Starter (\$497/month + \$797 setup)

Best for: Solo practitioner, 1 location, under 20 calls/day - 1 AI phone agent (answers all inbound calls) - Books/reschedules appointments (integrates with their scheduling software) - After-hours coverage 24/7 - Handles FAQs

(insurance, location, hours, emergency triage) - Weekly call summary report
- 1,500 included call minutes/month (~30 min/day)

Tier 2 — Growth (\$697/month + \$997 setup) ← Lead with this

Best for: 1-2 locations, 20-60 calls/day - Everything in Starter - Outbound recall campaign (AI calls patients overdue for cleanings) - New patient intake via SMS after first call - Google review request automation - Monthly performance report with call recordings - 3,500 included call minutes/month

Tier 3 — Practice (\$997/month + \$1,497 setup)

Best for: Multi-location or high-volume (60+ calls/day) - Everything in Growth - Dedicated agent per location - Custom emergency triage protocol - Integration with practice management software (Dentrix, Eaglesoft, Open Dental) - Bi-weekly check-in call (30 min) - 7,000 included call minutes/month

Guarantee Language

“If your AI agent misses a call or books an incorrect appointment in the first 30 days, we’ll fix it same day — or refund your setup fee, no questions asked.”

This is safe because: (a) Bland AI has 99.9% uptime, (b) “incorrect booking” is rare and fixable within minutes, (c) you keep the monthly retainer either way.

Your Unit Economics (Tier 2, Bland Build Plan)

Revenue	\$697/month per client
Bland AI platform cost	~\$299/month (covers ~3-4 clients on Build plan)
Per-client platform cost	~\$75-\$100/month
Setup fee (one-time)	\$997
Monthly gross profit per client	~\$597-\$622
Margin	~86%

At 8 clients: ~\$4,776/month net recurring + setup fees for new clients.

Upgrade path: At 5+ clients, move to Bland AI Scale plan (\$499/mo) to lower per-minute costs. At 10+ clients, negotiate a reseller deal directly with Bland.

Objection Handling

“Our patients want to talk to a real person.” > “Completely understandable. Our agent sounds natural, handles the routine 80% of calls — scheduling, hours, insurance, directions — and transfers complex calls to your team instantly. Your staff spends their day on patient care, not on-hold requests.”

“We already have a receptionist.” > “Perfect — this doesn’t replace them. It handles overflow calls, after-hours calls, and the ‘can I get your hours’ calls so your receptionist can focus on patients who are actually in the office.”

“What if the AI says something wrong?” > “Every call is recorded and logged. You can review any call in 30 seconds. The agent only answers what you’ve told it to answer — it won’t make up anything. Anything outside its script goes straight to your team.”

“How much does it cost?” > “Less than one day of front desk coverage per month. And it works every night, every weekend, never calls in sick.”

Upsell Path (Month 4+, Phase 2)

Once a dental client is on retainer and trusts you, offer:

- **Appointment reminder automation** (+\$150-\$200/month) — reduces no-shows by 40%
- **Review generation campaign** (+\$150/month) — automated post-visit Google review requests
- **Reactivation campaign** (+\$250-\$300/month, one-time) — AI contacts lapsed patients
- **Full practice automation audit** (\$2,500 one-time) — maps all manual workflows, delivers automation plan

These Phase 2 upsells move a \$697/month client toward \$1,200-\$1,500/month without adding a new client. # Target Market — Syncpoint AI

Ideal Client Profile (ICP)

Primary: Independent dental practice, 1-3 locations, Southwest US

Secondary: Multi-specialty dental group (DSO affiliates with local autonomy)

Qualifying Signals (prospect is a good fit if...)

- Google listing shows: “May not answer” or mixed reviews mentioning missed calls
- 3.5-4.2 star rating (common complaint: hard to reach, long hold times)
- 1-5 front desk staff visible on their website

- Uses Dentrix, Eaglesoft, Open Dental, or Curve (common systems = easy integrations)
- No obvious chatbot or AI tools on their website
- Practice has been open 3+ years (stable, not a startup)
- Solo dentist or small group (not corporate chain — chains have centralized IT)

Disqualifying Signals (skip these)

- Part of a large DSO (Heartland, Aspen, Pacific Dental) — IT decisions centralized
 - Brand new practice — no call volume yet
 - Oral surgery / orthodontics only — scheduling complexity too high for Tier 1
-

Southwest US Market Specifics

Texas (highest priority)

- 17,000+ independent dental practices statewide
- No specific AI voice agent regulations for scheduling calls
- Target cities: Dallas, Houston, Austin, San Antonio, Fort Worth
- Best sub-niches: Family dentistry, cosmetic dentistry in suburban markets

Arizona

- High density of snowbird patients = high after-hours booking demand
- Target: Phoenix Metro, Tucson, Scottsdale
- Practices in retirement-adjacent areas especially underserved on after-hours

California

- Largest market but most competitive
- Avoid LA/SF core — go for: San Diego suburbs, Sacramento, Inland Empire, Fresno
- Note: CA has stricter TCPA rules — ensure outbound recall campaigns have proper opt-in language

Colorado

- Denver, Colorado Springs, Fort Collins
- Affluent suburbs = higher LTV per patient = easier to justify your pricing

Nevada

- Las Vegas and Reno suburban practices

- High-volume practices due to tourism-adjacent patient mix
-

How to Build Your Prospect List

Method 1: Google Maps Scrape (Free, 1-2 hours)

1. Go to Google Maps → search “dental office [city, state]”
2. Filter: 3-4.5 stars, “independently owned”
3. Copy: Practice name, phone, website, owner name (from About page)
4. Look for reviews mentioning “hard to reach,” “always on hold,” “left a message”
5. Target: 20 prospects per city × 5 cities = 100 initial prospects

Method 2: Apollo.io (Free tier, 50 exports/month)

- Search: “dentist” + state = TX, AZ, CA, CO, NV
- Filter: Company size 1-10 employees, “Owner” or “Practice Manager” title
- Export: Name, email, LinkedIn, phone
- 50 free contacts/month = enough for Week 1 outreach

Method 3: LinkedIn Sales Navigator (if budget allows, \$79/month)

- Search: “Dental Practice Owner” OR “Office Manager” + location
 - Best for warm follow-up after cold email
-

Your First 100 Prospects

Build this list before sending a single email:

#	Practice Name	City	State	Owner/ Mgr	Email	Phone	Google Stars	Notes
1								
...								

Target distribution: - 40 in Texas (Dallas, Houston, Austin) - 25 in Arizona (Phoenix, Scottsdale) - 20 in California (San Diego, Sacramento suburbs) - 10 in Colorado (Denver suburbs) - 5 in Nevada (Las Vegas suburbs)

Prioritization Matrix

Tier A (contact first): Reviews mention missed calls OR “hard to reach” + 3.5-4.2 stars + 1 location

Tier B: No obvious phone complaints but 1 location, no chatbot visible on site

Tier C: Multi-location or 4.5+ stars (harder sell — they think they're doing fine)

Start with 20 Tier A contacts in Week 1. Do not spray-and-pray all 100 at once. # Cold Outreach System — Syncpoint AI

Setup Checklist (Do Once)

☐

Create seth@syncpointai.com (or forward from syncpointcreative.com)

☐

Set up Instantly.ai (\$37/mo) — handles sending + follow-up sequences automatically

☐

Warm up your sending domain for 14 days before first campaign (Instantly does this)

☐

Create [Cal.com](https://cal.com) booking link: cal.com/syncpointai/demo (15-min discovery call)

☐

Record a 60-second Loom of the demo agent in action (use your fake dental demo)

Cold Email Sequence (5 Emails, Fully Written)

Campaign settings (Instantly): - Send window: Tue-Thu, 8am-11am
recipient timezone - Max emails/day from this address: 40 - Delay between emails: 3 business days - Stop sequence on: reply OR click on calendar link

Email 1 — The Hook (Day 1)

Subject: {{practice_name}} – quick question about missed calls

Hi {{first_name}},

Quick question — do you know how many calls your practice misses after hours or when your front desk is with a patient?

For most dental offices, it's 30-40% of inbound calls. Each missed new patient call is typically \$800-\$2,500 in lifetime value walking out the door.

We built an AI phone agent for dental practices that answers every call, books appointments, handles FAQs, and works 24/7 — without adding headcount.

Worth a 15-minute call to show you how it works for practices similar to yours in {{city}}?

— Seth
Syncpoint AI
[Book a 15-min call](#)

Email 2 — Social Proof (Day 4)

Subject: Re: {{practice_name}} — quick question about missed calls

Hi {{first_name}},

Following up — wanted to share a quick example.

A family dentistry practice in [city similar to theirs] was missing 35% of after-hours calls. Within 3 weeks of turning on our AI agent, they recovered 18 new patient bookings that previously would have gone to voicemail.

At \$1,200 average new patient value, that's \$21,600 in recovered revenue — on a \$697/month subscription.

The agent handles scheduling, insurance questions, directions, and emergency triage. Your front desk handles everything else.

Happy to show you a live demo — 15 minutes, no pitch deck.

— Seth
Syncpoint AI
[Book here](#)

Email 3 — Pain Twist (Day 7)

Subject: {{practice_name}} — the 2am problem

Hi {{first_name}},

Here's a scenario that happens constantly:

A potential new patient has a toothache at 10pm. They Google "dentist near me," call your office, get voicemail, then call the next practice on the list — who answers.

You never knew the call happened. They're now someone else's patient.

Our AI agent answers that 2am call, triages urgency, books the appointment, and sends a confirmation text — all before your team comes in the next morning.

Would a 15-minute demo be worth your time this week?

— Seth
Syncpoint AI
[Yes, show me](#)

Email 4 — Objection Pre-empt (Day 10)

Subject: Common question about AI agents for dental offices

Hi {{first_name}},

A few practice owners have asked me: “Will patients know they’re talking to an AI?”

Honest answer: our agent sounds natural and conversational — most patients don’t ask. But if they do ask, the agent tells them honestly and offers to transfer to a human.

What we’ve found is that patients don’t care about AI vs. human for the call they’re making. They care about getting their question answered and their appointment booked. That’s what the agent does.

If you’ve been curious but skeptical, I’d rather show you than tell you. 15 minutes on a call:

[Book a demo](#)

— Seth
Syncpoint AI

Email 5 — The Close (Day 14)

Subject: Last note, {{first_name}}

Hi {{first_name}},

I’ll keep this short — I know you’re busy.

If the idea of recovering missed-call revenue and never worrying about after-hours coverage again sounds useful, I’d love 15 minutes to show you how it works.

If the timing isn’t right, no worries — I’ll leave you alone.

[One last chance to book a demo](#)

Either way, I hope {{practice_name}} has a great quarter.

— Seth
Syncpoint AI

LinkedIn Outreach Sequence

Use this after someone opens your email but doesn't reply (Instantly tracks opens).

LinkedIn Message 1 (Day 5 if email opened, no reply)

Hi {{first_name}} — sent you an email earlier this week about AI phone agents for dental practices. Wanted to connect in case email got buried. The short version: we help practices recover missed-call revenue automatically. Worth a quick chat?

LinkedIn Message 2 (Day 9 if no response)

Hi {{first_name}} — no worries if the timing's off. Just wanted to leave this here: [your Loom demo link]. 60 seconds — shows exactly what the AI agent does on a call. If it resonates, my calendar link is in my bio.

Demo Call Script (15 Minutes)

Minutes 1-3: Qualifying

"Tell me a bit about your practice — how many locations, roughly how many calls do you get per day, and how is your front desk currently handling after-hours?"

Listen for: volume, pain, awareness of missed calls.

Minutes 3-8: Live Demo

"Let me show you the agent in action. I'm going to call my demo dental office line right now — I'll put it on speaker."

[Call your Bland AI demo number. Let them hear the agent handle a scheduling request and a FAQ.]

"What you just heard is a configured version for a dental office. Yours would have your practice name, your scheduling software, your specific services."

Minutes 8-12: Fit Check

“Does this feel like something that would actually solve a problem in your office?”

Wait for their answer. If yes → go to close. If hesitant → address one objection.

Minutes 12-15: Close

“Here’s what getting started looks like. We do a 45-minute onboarding call, I set up the agent using your practice details, we test it together, and you’re live within 48 hours. Setup is \$997 and the monthly is \$697. Is there a reason we wouldn’t get started this week?”

Weekly Outreach Cadence (Your 35-min Monday block)

1. Check Instantly dashboard → reply to any responses (10 min)
2. Mark replied/booked contacts in your tracking sheet (5 min)
3. Add 10-20 new contacts to the sequence (10 min, from your pre-built prospect list)
4. Review open rates — if below 35%, test a new subject line this week (10 min)

Target metrics: - Open rate: 40-60% (dental office managers check email regularly) - Reply rate: 5-12% (industry average for cold B2B is 2-4%) - Demo booking rate: 2-5% of total sends - Close rate from demo: 30-40% (pain is obvious, price is justified) - To get 1 new client: Send ~50-100 emails # Agent Configuration — Syncpoint AI (Retell AI)

Platform Choice: Why Retell AI (Not Bland AI)

Bland AI was the early market leader but has meaningful problems for this use case: - **Latency:** 800ms-2 second response time causes callers to talk over the agent, breaking the “sounds natural” pitch - **Support:** Multiple reports of week+ response times — unacceptable when a client’s agent breaks mid-day - **Inbound optimization:** Bland is built for outbound campaigns; dental calls are inbound

Retell AI wins on inbound dental calls: - ~600ms latency (industry-leading for inbound) - Native appointment booking integrations - HIPAA-eligible plans - Better voice quality - Comparable pricing at moderate volume

Alternative: Synthflow AI has the strongest white-label features (custom domain, Stripe rebilling) but the agency plan (\$1,400/mo) is only worth it at 8+ clients. Revisit Synthflow at that point.

Platform Setup (Do Once)

1. Sign up at app.retellai.com → start on the pay-as-you-go plan (~\$0.15/min all-in)
 2. Go to Settings → White Label → enable custom branding as “Syncpoint AI”
 3. Create a test phone number (~\$2/month) → this is your demo line
 4. Create a “Template” agent called “Dental Practice — Base Template”
 - All new client agents clone from this template
 - Customization per client takes ~90 minutes with this system
-

Base System Prompt (Dental Template)

Copy this into Bland AI → Agent → System Prompt. Replace {{variables}} per client.

You are the AI receptionist for {{PRACTICE_NAME}}, a dental practice located at {{ADDRESS}} in {{CITY}}, {{STATE}}.

Your name is {{AGENT_NAME}} (default: "the front desk assistant").

YOUR PRIMARY JOBS:

1. Answer questions about the practice
2. Schedule, reschedule, or cancel appointments
3. Handle common FAQs
4. Route urgent/emergency calls to the right person
5. Collect new patient information

YOUR TONE:

- Warm, professional, and calm
- Never rushed
- Speak at a natural pace – do not speak faster than a human receptionist would
- If you don't know the answer to something, say "Let me have someone from our team follow up with you on that" – do NOT make up answers

PRACTICE DETAILS:

- Hours: {{HOURS}} (e.g., Mon–Fri 8am–5pm, Sat 9am–1pm)
- Phone: {{MAIN_PHONE}}
- Services: {{SERVICES}} (e.g., general dentistry, cosmetic dentistry, Invisalign, emergency dental)
- Insurance accepted: {{INSURANCE_LIST}}
- Scheduling software: {{SOFTWARE}} (e.g., "Our team uses Dentrix")

SCHEDULING:

- For appointment requests: Collect name, date of birth, phone

number, reason for visit, and preferred day/time

- Tell the caller: "I'll have our scheduling team confirm your appointment within [2 hours / by end of business day] and send you a confirmation text."
- Do NOT promise a specific appointment slot unless you have live integration with their calendar
- [IF CALENDAR INTEGRATION IS ACTIVE]: You have access to real-time availability. Book directly and confirm the slot.

EMERGENCY TRIAGE:

- If caller describes: severe pain, swelling, abscess, broken tooth with bleeding, injury → say: "This sounds like it may need same-day attention. Let me connect you to our on-call team right now." → Transfer to {{EMERGENCY_NUMBER}}
- If after hours and non-emergency: "Our office opens at {{OPENING_TIME}}. I've noted your request and someone will call you first thing. Can I get your name and phone number?"

NEW PATIENT INTAKE:

- Ask: Full name, date of birth, phone number, email, insurance provider and member ID, reason for first visit, how they heard about the practice
- End with: "Wonderful! I've got your information. Our new patient coordinator will call you within [timeframe] to confirm your first appointment and answer any insurance questions."

THINGS YOU NEVER DO:

- Give specific dental advice or diagnoses
- Quote specific prices or insurance coverage amounts
- Make promises about wait times you can't keep
- Argue with a caller or respond defensively to complaints
- Continue a call if someone is abusive – say "I'll have a team member call you back" and end the call

TRANSFERS:

- If caller insists on speaking with a human: "Of course, let me connect you." → Transfer to {{TRANSFER_NUMBER}}
- If no one is available: "Our team is currently with patients. I've noted your call and we'll call you back within [timeframe]. Can I confirm the best number to reach you?"

CALL ENDING:

- Always end with: "Thank you for calling {{PRACTICE_NAME}}. Have a great day!"
 - For appointment confirmations: "We'll see you [day] at [time]. If anything comes up, feel free to call us back."
-

Per-Client Variable Checklist

Collect these from the client during onboarding:

- ☐ PRACTICE_NAME — Official name of the practice
 - ☐ ADDRESS — Full street address
 - ☐ CITY, STATE — For local context
 - ☐ AGENT_NAME — What to call the agent (many prefer “our scheduling assistant” or their practice name)
 - ☐ HOURS — Full weekly hours including holidays/exceptions
 - ☐ MAIN_PHONE — Their real front desk number
 - ☐ SERVICES — Top 5-8 services offered
 - ☐ INSURANCE_LIST — Which plans they accept (get this from their website or ask)
 - ☐ SOFTWARE — Their practice management system
 - ☐ EMERGENCY_NUMBER — Number for emergency transfers (often the dentist’s cell)
 - ☐ TRANSFER_NUMBER — Number for “speak to a human” transfers
 - ☐ OPENING_TIME — First appointment of the day
-

FAQ Knowledge Base (Add Per Client)

In Bland AI → Agent → Knowledge Base, add these as Q&A pairs:

Q: Where are you located?

A: We're located at {{ADDRESS}}. [Add parking/directions note if provided]

Q: What are your hours?

A: We're open {{HOURS}}. For after-hours emergencies, [protocol].

Q: Do you accept my insurance?

A: We accept {{INSURANCE_LIST}}. If you don't see yours listed, our team can verify your benefits – just give us your insurance provider and member ID.

Q: How much does a cleaning cost?

A: Costs vary based on insurance and the type of cleaning needed. Our team can give you an accurate estimate after we verify your benefits. Would you like to schedule a visit?

Q: Are you accepting new patients?

A: Yes! We'd love to have you. Can I get your name and a good phone number to have our new patient coordinator reach out?

Q: Do you do emergency same-day appointments?

A: Yes, we keep time in our schedule for dental emergencies. What's going on? [Triage based on severity]

Q: Can I get a prescription called in?

A: Our dentist will need to evaluate you before prescribing. If you're in pain, I can see about getting you in today. Would that help?

Bland AI Technical Settings

Setting	Value
Voice	"Heather" or "David" (test both — pick warmer sounding)
Speed	0.95 (slightly slower than default = sounds more natural)
Max call duration	10 minutes
Interruption sensitivity	Medium
Background noise	"Office" preset
Voicemail detection	ON — leave custom voicemail per client
Call recording	ON — mandatory for exception review
Transfer type	Warm transfer (agent stays on until human picks up)

Voicemail Script Template

Hi, you've reached {{PRACTICE_NAME}}. We're currently helping other patients and can't take your call right now.

Please leave your name, phone number, and a brief reason for your call, and we'll get back to you within [2 hours / same business day].

If this is a dental emergency, please call {{EMERGENCY_NUMBER}}.

Thanks for calling {{PRACTICE_NAME}} — we look forward to speaking with you.

Testing Protocol (Before Going Live with a Client)

Run through all of these test calls before client launch:

- ☐ Call asking to schedule a new patient appointment
- ☐ Call asking about hours
- ☐ Call asking about insurance (one they accept, one they don't)
- ☐ Call describing an emergency (pain + swelling)
- ☐ Call at "after hours" — change Bland AI schedule to simulate
- ☐ Call asking to speak to a human → confirm transfer works
- ☐ Call asking about price → confirm it handles without quoting
- ☐ Hang up mid-call → confirm no errors

Record and review all 8 test calls. Fix any issues before going live. # Client Onboarding SOP — Syncpoint AI

Goal: Client live within 48 hours of payment. Total your time: 3-4 hours per client. (Drops to 2 hours by your 4th client once you've run the process a few times.)

Payment & Kickoff (Day 0, ~15 min)

- ☐ Send invoice via Stripe or Wave (setup fee + first month)
- ☐ On payment confirmation, send **Welcome Email** (template below)
- ☐ Create client folder in Notion: /clients/[practice-name]/
- ☐ Copy the onboarding intake form link into the welcome email

Welcome Email Template

Subject: You're in — here's what happens next

Hi {{first_name}},

Welcome to Syncpoint AI! We're excited to get your practice answering every call.

Here's what happens in the next 48 hours:

Step 1 — Your Intake Form (takes 10 minutes) Please fill out this form so we can configure your AI agent correctly: [Notion form or Typeform link]

Step 2 — Our Setup Call (30-45 minutes) Once we have your intake form, I'll send you a calendar invite for our setup call. On that call we'll: - Review your agent's script and FAQ responses - Set up the call transfer to your front desk - Do a live test call together

Step 3 — Go Live After the setup call, your agent will be live and answering calls. I'll send you the new forwarding number to add to your phone system.

Your weekly report will arrive every Monday morning with call volume, bookings, and any calls flagged for your review.

Questions before we get started? Just reply here.

— Seth
Syncpoint AI

Intake Form (Typeform or Notion — embed these fields)

1. Practice name (as you want the agent to say it)
2. Full address + parking/directions notes
3. Office hours (all days, including holiday hours if known)
4. Services offered (list top 6-8)
5. Insurance plans accepted
6. Practice management software (Dentrix / Eaglesoft / Open Dental / Curve / Other)
7. Name to use for the AI agent ("our front desk assistant" or a name)
8. Transfer number for "speak to a human" requests
9. Emergency after-hours number
10. First appointment time each day
11. Average wait for a callback ("we call back within ____")
12. Anything the agent should NEVER say or promise
13. Any common questions not covered above

Agent Build (Day 1, ~90 min)

☐

Log in to Bland AI → duplicate "Dental Practice — Base Template"

☐

- ☐ Rename: “[Practice Name] — Live”
 - ☐ Fill in all {{variables}} from intake form
 - ☐ Build FAQ knowledge base from their website (scrape their services page)
 - ☐ Set call hours to match their office schedule
 - ☐ Configure transfer numbers
 - ☐ Set voicemail script
 - ☐ Configure call recording ON
 - ☐ Run all 8 test calls from the testing protocol (see doc 04)
 - ☐ Note any issues → fix before setup call
-

Setup Call (Day 1 or 2, 30-45 min)

Agenda:

1. **(5 min)** Confirm intake details — any changes or additions?
2. **(15 min)** Live test call together — call the agent, walk through scenarios
 - “New patient booking”
 - “Question about hours”
 - “I have a toothache”
 - Client picks one random scenario they’re worried about
3. **(10 min)** Phone system setup — how to forward calls to the Bland AI number
 - Most VoIP systems (RingCentral, Grasshopper, Google Voice): forward to Bland number after X rings OR after hours
 - Traditional landline: client calls their phone provider, sets up call forwarding
 - If they use a dental-specific phone system: provide the Bland number and step-by-step
4. **(5 min)** Walk through their weekly report format
5. **(5 min)** How to reach you if something’s wrong

Call forwarding options to discuss: - **Full forward:** All calls go to AI agent first (agent answers, transfers to human if needed) — best option - **Overflow forward:** Calls forward to AI only when front desk doesn’t answer in 3-4 rings — good entry point for hesitant clients - **After-hours only:** AI only handles calls outside office hours — easiest sell, lowest disruption

Go-Live Checklist (Day 2)

☐

Client has confirmed call forwarding is set up

☐

Make one “mystery caller” test call from an outside line to confirm the live path works

☐

Send client their **Go-Live Confirmation** email (template below)

☐

Set up Monday morning automated report (see doc 06 for format)

☐

Add client to your weekly oversight dashboard

Go-Live Confirmation Email Template

Subject: Your AI agent is live — here’s what to expect

Hi {{first_name}},

Your AI agent is officially live and answering calls for {{practice_name}}.

What’s happening now: - Every [after-hours / overflow / all] call is being handled by your agent - Calls are being recorded and logged - You’ll get your first weekly report this Monday

If you need to reach me: - Urgent issue (agent down, wrong behavior): [your cell or direct email] - Normal questions: reply to this email — I respond within 4 hours on business days

Your agent’s log: [Link to Bland AI client dashboard or your reporting sheet]

Looking forward to showing you the results next week!

— Seth
Syncpoint AI

Ongoing Client Management (Monthly, ~20 min/client)

☐

Review call logs for any flagged calls (unusual behavior, complaints)

☐

Check booking confirmation rate — are schedulers actually following up?

- ☐ Send monthly summary (see doc 06 for template)
- ☐ Note any FAQ gaps (calls where agent said “I don’t know”) → update knowledge base
- ☐ Look for upsell signal: high call volume → pitch Tier upgrade or recall campaign add-on

Offboarding (If Client Cancels)

- ☐ Give 30-day notice (built into your terms)
- ☐ Turn off forwarding on their end (client action)
- ☐ Archive call logs to their folder
- ☐ Send “we’re sorry to see you go” email with summary of calls handled
- ☐ Deactivate their Bland agent (do not delete — keep 90 days for dispute resolution) # Weekly 2-Hour Oversight Protocol — Syncpoint AI

When: Every Monday, 8:00-10:00am
Total time: ~2 hours (drops to 90 min by month 4 as systems mature)

Your Monday Dashboard

Build this as a single Notion page or Google Sheet. One row per client.
Review top-to-bottom.

Client	Calls This Week	Bookings	Transfers	Flags	Monthly Revenue	Status
Practice A	47	12	3	0	\$697	
Practice B	31	8	5	1	\$697	Review flag

Pull this data from: Bland AI dashboard → each agent → call logs

The 2-Hour Block, Minute by Minute

Block 1: Exception Review (0:00-0:30)

Review any call flagged by the agent. Bland AI flags calls when: - Agent said “I don’t know” or hit its limit - Caller asked to speak to a human - Call ended abruptly - Caller described an emergency

For each flag: 1. Listen to the 60-second relevant portion (not the whole call unless needed) 2. Categorize: Training Gap | Client Issue | No Action Needed 3. Training gaps → add to that client’s knowledge base (takes 2 min each) 4. Client issues (wrong transfer number, scheduling system changed) → email client

Expected volume: 0–3 flags per client per week when running smoothly

Block 2: Client Messages + Email (0:30-0:50)

- Reply to any client emails or texts from the past week
- Standard replies take 2–3 minutes each
- If a client is upset: do not rush, use the de-escalation template below

De-escalation template: > “Hi [name], thanks for flagging this. I’ve reviewed the call and here’s what happened: [1-sentence explanation]. I’ve already updated the agent to handle this differently going forward. Let me know if you’d like to talk through it — happy to jump on a call.”

Block 3: Performance Review (0:50-1:10)

For each client, check: - **Booking confirmation rate:** Are leads from the agent getting followed up by their staff? If a client reports “AI books but patients don’t show” → the problem is their staff, not your agent. Address this diplomatically. - **Call volume trend:** Increasing = practice is growing, agent is working. Decreasing = check if call forwarding is still set up correctly. - **After-hours ratio:** What % of calls are after-hours? High ratio = your agent is most valuable. Use this in their monthly report as a win.

Threshold alerts (investigate if you see these): - Calls drop >30% week-over-week: call forwarding may have been turned off - Transfers spike >20% of calls: agent may have a knowledge gap, check flags - Zero bookings for 3+ days: check if their scheduling link/calendar is broken

Block 4: Weekly Performance Emails (1:10-1:25)

Send each client their weekly summary. Use this template — fill in the numbers (takes 3 min per client once you have the data):

Subject: {{practice_name}} — Weekly AI Agent Report (Week of {{date}})

Hi {{first_name}},

Here's your Syncpoint AI summary for the week:

Total Calls Handled: {{total_calls}}

Appointment Requests Captured: {{bookings}}

After-Hours Calls Answered: {{after_hours}} ({{after_hours_pct}}% of total)

Calls Transferred to Your Team: {{transfers}}

Highlight this week: {{one_sentence_win — e.g., “We captured 4 new patient requests on Saturday — your busiest after-hours day.”}}

Action for your team: {{one_action — e.g., “3 patients are waiting for a callback from Friday evening — these are in your voicemail log.”}}

Talk soon,
Seth | Syncpoint AI

Automation option (Month 3+): Use Make.com to auto-pull Bland AI call data into a Google Sheet, then auto-populate and send this email via Gmail. Eliminates this block entirely. Setup takes ~3 hours once.

Block 5: Outreach Queue (1:25-2:00)

Check your Instantly.ai dashboard: - [] Any replies? → Respond and book demo (10 min if any) - [] Any demos this week? → Confirm or follow up - [] Add 10-20 new prospects from your pre-built list → drag into sequence (10 min) - [] Check open rate on last week's emails → if under 30%, swap subject line

At 8 clients: You likely don't need new outreach. Pause the sequence and focus on Phase 2 upsells.

Monthly Client Report (Send End of Month, ~30 min total)

More detailed version of the weekly report. Send the Monday after month-end.

Monthly report includes: - Total calls handled (month + trend vs. prior month) - Estimated revenue recovered (calls handled × assumed conversion rate × avg patient value) - Use: 15% conversion rate × \$1,500 average new patient value as default - Example: 40 after-hours calls × 15% × \$1,500 = \$9,000 in recovered revenue potential - Top FAQ categories (shows what patients are asking most) - Any agent updates made this month - Optional:

recommended upsell (“Based on your call volume, you’re ready for the recall campaign add-on — here’s what it would do”)

What to Do When Something Breaks

Agent not answering calls

- 1. Check Bland AI status page (status.bland.ai) — is there a platform outage?
- 2. Log in, check if agent is still active and not paused
- 3. Call test number — does it ring through?
- 4. If all clear on Bland side → call client, check their call forwarding settings
- 5. If outage: notify client within 30 min with ETA from Bland, offer credit

Client reports wrong information given

- 1. Pull the specific call recording (client gives you date/time)
- 2. Listen to the full call
- 3. Identify what knowledge was missing or wrong
- 4. Update the knowledge base or system prompt
- 5. Respond to client: “Fixed — here’s what the agent will say now: [new response]”
- 6. Always within same business day

Client wants to cancel

- 1. Don’t panic — ask: “What would need to be different for this to keep working for you?”
 - 2. Common fix: they think the agent is replacing their receptionist (it’s not — it’s supplementing)
 - 3. Offer: 1 month at 50% while you troubleshoot, or downgrade to after-hours only
 - 4. If they still want to cancel: honor it gracefully, offboard per SOP
-

KPIs to Track Monthly (Your Business Health)

Metric	Target (Month 3)	Target (Month 6)
Active clients	4-5	8-12
Monthly recurring revenue	\$2,000-\$3,500	\$5,500-\$8,400
Avg revenue per client	\$697	\$750+ (upsells)
Client churn rate	<5%/month	<3%/month
Calls handled/client/week	30-60	30-60
Weekly time in business	<3 hours	<2 hours

Phase 2: Healthcare Automation Agency — Syncpoint AI

When to start: Month 4-5, when you have 5+ voice agent clients and < 2 hours/week of overhead **Target:** Add \$2,000-\$4,000/month without adding significant time **Strategy:** Sell deeper automation to existing voice agent clients (no new client acquisition needed at first)

The Phase 2 Thesis

Your dental clients already trust you. They've seen your AI agent work. Now you're showing them the next layer: automated workflows that eliminate manual tasks their staff does every day.

This is not a separate business. It's an upsell to the same 8-12 clients you already have.

Phase 2 revenue model: - Average Phase 2 upsell: \$400-\$800/month additional per client - At 6 of 12 clients taking Phase 2 upsells: +\$2,400-\$4,800/month - Total combined Phase 1 + Phase 2: \$8,000-\$16,000/month

The 4 Core Automations to Sell

Automation 1: Appointment Reminder System (+\$150-\$200/month)

Problem it solves: No-shows cost a dental practice \$200-\$500 per missed slot. Most practices do manual reminder calls.

What it does: - 72 hours before appointment: SMS + email reminder with 1-click confirm/reschedule - 24 hours before: final SMS reminder - 2 hours before: if unconfirmed, AI makes an automated confirmation call - No-show detected: auto-sends reschedule link + adds to recall list

Tools: Make.com (\$9/month) + Twilio (\$15-\$30/month for SMS) + their practice management API or webhook

Your build time: 3-4 hours first client, 1-2 hours each repeat

ROI pitch: "If this saves just 2 no-shows a month at \$400 average, that's \$800 recovered for \$175."

Automation 2: Review Generation Campaign (+\$150/month)

Problem it solves: Most dental practices have 50-200 Google reviews. Practices with 500+ reviews rank dramatically higher in local search.

What it does: - 2 hours after appointment: patient gets SMS: "How was your visit at [Practice]? [Thumbs up / Thumbs down]" - If positive: direct link to Google review page - If negative: routes to private feedback form (captures complaint before it goes public) - Tracks review count monthly, sends client monthly report

Tools: Make.com + Twilio + Google Business API (free)

Your build time: 2-3 hours

ROI pitch: "A practice going from 80 to 300+ reviews typically sees 30-40% more new patient calls from Google."

Automation 3: Patient Reactivation Campaign (+\$250-\$400, one-time or monthly)

Problem it solves: Every practice has hundreds of patients who haven't been in for 18+ months. Reactivating one = \$1,500+ lifetime value.

What it does: - Extract lapsed patient list from their practice management system (they export as CSV) - AI-personalized SMS/email sequence over 3 weeks: "Hi [name], it's been a while — is now a good time to schedule your next cleaning?" - Warm leads automatically handed off to front desk to confirm - Track reactivated patients vs. campaign cost

Tools: Make.com + Twilio + Claude API for personalization

Your build time: 4-6 hours (one-time build + run per quarter)

ROI pitch: "A 200-patient reactivation campaign that converts 15% = 30 patients back. At \$300 average visit value, that's \$9,000. Campaign cost: \$300-\$400."

Automation 4: New Patient Intake Automation (+\$200-\$300/month)

Problem it solves: New patients call, leave info with front desk or AI agent, then staff manually enter data into Dentrix/Eaglesoft. Takes 10-15 min per patient.

What it does: - After a new patient inquiry (from your voice agent or web form), patient gets a link to a digital intake form - Completed form data automatically enters their practice management system (via API or CSV)

import) - Patient insurance info triggers automated benefits verification request - Patient gets confirmation + “what to bring to your first visit” email

Tools: Make.com + Typeform (\$29/month for client) + PMS integration

Your build time: 5-8 hours (depends on PMS)

ROI pitch: “10 new patients a month × 12 minutes saved each = 2 hours of front desk time back per month. And no data entry errors.”

Phase 2 Sales Script (Upsell Conversation)

Context: You’re on your monthly check-in call with a client who loves the voice agent.

“One thing I’ve noticed in your call logs — you’re capturing a lot of after-hours new patient requests, which is great. But I can see when we look at conversion rates that some of those aren’t making it to confirmed appointments. Want me to show you an automation that follows up with those leads automatically within 2 hours — so your staff wakes up Monday morning and the appointment is already confirmed?”

Wait for their reaction.

“It’s about \$200/month on top of what you’re already paying. I can have it running within a week. The typical practice sees their new patient show rate go from 60% to 80%. Is that worth a try?”

Key: Lead with the problem you’ve already observed in their data. You have 6 weeks of their call logs. You can legitimately say “I noticed X in your data.”

Phase 2 Delivery Stack

Tool	Cost	What It Does
Make.com (Starter)	\$9/month	Workflow automation (trigger → action)
Twilio	\$15-\$50/month	SMS sending
GoHighLevel	\$97/month	CRM + pipeline + reputation mgmt + reporting (consolidates everything)
Claude API	~\$10-\$30/month	AI-personalized messages in reactivation campaigns
Typeform	\$29/month	Beautiful intake forms
Total add	~\$160-\$215/month	

At 6 Phase 2 clients paying \$250-\$400/month, your Phase 2 revenue is \$1,500-\$2,400/month at ~85% margins.

Expansion Beyond Dental (Month 8+)

Once the dental playbook is documented and repeatable, apply the same system to:

HVAC & Home Services - Same voice agent setup (after-hours booking, dispatch automation) - Seasonal campaign automation (pre-summer AC tune-up, pre-winter furnace check) - Review generation (same stack) - Target: Phoenix, Las Vegas, Dallas suburban contractors

Chiropractic / Physical Therapy - Very similar to dental (appointment-heavy, insurance-driven) - Reactivation campaigns work especially well - Compliance is simpler than dental (no PHI concerns with scheduling)

Med Spa / Aesthetic Services - High ticket per visit (\$300-\$800+) - Heavy social proof sensitivity → review generation is huge - Post-treatment follow-up automation = loyalty/rebooking driver

Expansion timing: Start pitching one adjacent niche when dental is at 10+ clients and < 2 hrs/week. Use your dental case studies as proof.

12-Month Revenue Projection

Month	Clients	Avg MRR/Client	Total MRR	Weekly Hours
1	1	\$697	\$697	10-15
2	3	\$697	\$2,091	8-10
3	5	\$700	\$3,500	5-7
4	7	\$720	\$5,040	3-5
5	8	\$750	\$6,000	2-3
6	10	\$900	\$9,000	2
8	12	\$1,050	\$12,600	2
10	14	\$1,100	\$15,400	2-3
12	15	\$1,200	\$18,000	2-3

Avg MRR/client grows as Phase 2 upsells layer in. These are conservative, not ceiling figures.
